SUMMARY

Growth and content marketer with [X] years across performance marketing, B2B content, and technical account management at Amazon. I build systems that turn content into measurable growth: data-driven acquisition funnels on Meta and Google (22x ROAS sustained over 36 months), and AI-assisted content pipelines that take a post from idea to published, on-brand graphic with no manual design or posting. Led [team of N] across [writers / designers / media buyers].

EXPERIENCE

[Founder / Lead], Performance & Content Marketing [Mon YYYY – Present]
[Agency / Independent practice name] — paid growth and content for D2C and education brands

- Grew a D2C e-commerce account to **22x ROAS over 36 months** (₹3.0L ad spend → ₹68.6L sales) on Meta and Google, by running a weekly "kill losers early, scale winners in steps" budget system and fixing the offer before changing creative.
- Delivered **21.6x blended ROAS in 9 months** on a second account (₹1.77L spend → ₹38L sales), by reading return at campaign level instead of the account average and moving budget daily.
- Peaked at **42x ROAS in a single month** and ~130x on a low-cost test; held cost per purchase at ₹150–₹500 while scaling spend.
- Built an **AI-assisted content pipeline** end to end: a Gemini prompt library for visuals, a coded brand template (Node.js + Playwright) that renders on-brand graphics and carousels, and a Python scheduler on the LinkedIn Posts API that publishes daily via GitHub Actions. Cut production time per post from [X hours] to [Y minutes].
- Defined the **content agenda** for a B2B LinkedIn program: 3 content pillars, 30+ posts across stories, how-to explainers, proof carousels, and infographics, with a hook playbook, a 3-posts-a-week calendar, and a comment-response routine to grow reach. [Result: followers / impressions / inbound leads, e.g. "+X% followers in Y months"]
- Ran a **competitive audit** of a rival agency (positioning, SEO, social, creative) and turned it into a prioritized plan: proof-led positioning, industry landing pages, and a consistent publishing engine.
- [Managed / mentored N people (writers, designers, media buyers) — needed to show the "2 years managing people" requirement]

Technical Account Manager [Mon YYYY – Mon YYYY]
Amazon Development Centre India Pvt. Ltd.

- [Owned N accounts / \$X business; outcome you moved, e.g. "lifted adoption of X by Y%"]
- [Cross-functional project you led with product, engineering, or legal — scope and result]
- [Any analysis, documentation, or content you created that scaled (playbooks, FAQs, training) — reach and impact]

[Earlier role, if it adds marketing years] [Dates]
[Company]

- [One or two outcome bullets: accomplished X, measured by Y, by doing Z]

EDUCATION

[MBA / Master's in ____] — [Institute], [Year]
[Bachelor's in ____] — [Institute], [Year]

SKILLS

Growth & acquisition: lead-generation funnels, Meta Ads, Google Ads, budget scaling, offer testing, ROAS / CPA optimization, audience and creative-angle testing.

Content & editorial: content strategy, editorial calendars, B2B copywriting, hooks and carousels, brand systems, competitive and positioning analysis.

Generative AI: Gemini and Claude for drafting and visuals, prompt libraries, AI-plus-code content automation.

Data & tools: campaign-level performance analysis, [GA4 / Looker Studio / Excel — keep only what you use], Python, Node.js, Playwright, GitHub Actions, LinkedIn API.
